

Ajman Academy Technology Vision

At Ajman Academy, we believe that technology is an innovative and highly effective component of student learning, home-school partnerships and school operations. Students are engaged in a challenging curriculum that is focused on inquiry-based, authentic learning experiences. Students are comfortable using technology and take responsibility for their own educational success. Our technology standards are closely aligned with the IB frameworks, skills and expectations, with the vast majority of digital learning embedded and integrated through the units of study.

Ajman Academy also believes in the use of 1-1 Apple devices to support educationally appropriate tools and platforms to enhance a challenging and differentiated curriculum. Our technology is accessible and supported effectively for all of our school community to promote and exemplify the IB Learner Profile.
